

SUMMARY

Data Science graduate with foundations in Computer Science and internship experience's in delivering ETL pipelines, mobile apps and AI systems. Proficient in Python, SQL, and Flutter. Seeking graduate roles as Software, Data and AI Engineer where innovation and planning play pivotal roles.

EDUCATION

Master of Data Science • Deakin University, Melbourne | WAM: 80 Jul 2024 – Jun 2026

Coursework: Machine Learning, Deep Learning, NLP, Data Wrangling, Statistical Data Analysis, Mathematics for AI

Bachelor's in computer science & engineering • SASTRA University | CGPA: 8.62/10 Oct 2020 – Jun 2024

Coursework: Data Structures & Algorithms, OOP, Computer Networks, Cryptography Fundamentals, Software Engineering Practices

WORK EXPERIENCE

Junior AI Engineer • AI-Driven Bush Fire Forecasting • InnovAlte — Melbourne Jul 2025 – Dec 2025

- Designed the model input schema with 14+ physically grounded variables and a fixed tensor shape, serving as the cross-stream API contract between AI, Backend and Frontend teams and unblocking parallel development across the project.
- Built an 8-phase time series forecasting pipeline covering temporal decomposition, FFDI proxy feature engineering, and multi-output deep learning benchmarking across four architectures (LSTM, Transformer, CNN-LSTM) on 5,000 synthetic fire records
- Developed a physically grounded synthetic data generator and a **Model-as-a-Service** FastAPI deployment guide, enabling model prototyping and backend integration before production data was available.

Junior Data Engineer • Gopher Industries — Melbourne. Jul 2025 – Dec 2025

- Deployed patient-specific Random Forest models for real-time anomaly detection in healthcare telemetry, enabling early-stage physiological and behavioural risk identification resulting in 50% faster treatments.
- Engineered scalable **ETL data pipelines** for temporal aggregation and rule-based labelling with strong data governance policies. Collaborated with a **multi-disciplinary team** to ensure the successful implementation of **data solutions** and translated model metrics into business milestones for the stakeholders.

Full Stack Developer • Curowebs — India. Jan 2024 – Jul 2024

- Delivered a production-ready Flutter mobile app (C-Meds) by **owning the full stack** end-to-end across UI, backend and Play Store release, resulting in 300+ downloads and 100+ active users within months of launch.
- Reduced manual medical data entry by 90% by architecting a serverless GCP Cloud Functions pipeline integrated with Gemini Vision API, resulting in faster patient record processing and near-zero human error in data capture.
- Accelerated team release cycles by managing version control on **GitHub** and configuring deployment pipelines, resulting in structured and repeatable release workflows across a collaborative dev team.

PROJECTS

Fitness Coaching AI Platform • Microsoft Agent Framework | Azure OpenAI | Python

- Architected a 6-agent AI coaching platform using **Microsoft Agent Framework**, designing 40 custom tool functions across 7 domain modules (workout, nutrition, billing, scheduling, progress, safety, user management) — reducing manual coaching administration effort by an estimated 70% and improved customer experiences.
- Built sequential and concurrent **multi-agent workflows** (SequentialBuilder, ConcurrentBuilder, MagenticBuilder) orchestrating up to 5 specialist agents in parallel, cutting end-to-end workflow execution time by 5x compared to sequential processing.
- Deployed on Azure OpenAI via **Azure AI Foundry** with full DevUI integration for real-time agent testing, covering 4 end-to-end automation pipelines: member onboarding, program generation, weekly check-in, and injury safety screening across a projected client base of 100+ members.

Hyperscale Retail Command Centre • Microsoft Fabric | PySpark | Power BI

- Implemented end-to-end real-time analytics on Microsoft Fabric, unifying historical sales and live order streams using **Medallion Architecture** (Bronze, Silver, Gold layers).
- Built PySpark ETL pipelines and Facebook Prophet **time-series models** for 30-day demand forecasting and configured Fabric Activator alerts delivering stockout notifications in under 1 minute.

Bank Loan Performance Analysis • Power BI | DAX | SQL

- Designed a three-tier Power BI dashboard to monitor a \$435.8M loan portfolio with real-time tracking of funded amounts, interest rates, and debt-to-income ratios using complex **SQL queries** and **writing** techniques.
- Implemented MTD and MoM performance tracking to surface repayment health trends. Analysed loan statuses to achieve an 86.2% Good Loan rate and identify high-risk borrower segments.

Personal Portfolio AI • Python | Google Gemini | Flask | RAG

- Engineered a Retrieval-Augmented Generation (**RAG**) system using Gemini 2.5 Flash, transforming unstructured portfolio data into an interactive, semantically searchable knowledge base.
- Architected a Flask REST API for context-aware querying with cosine similarity retrieval along with optimised text-chunking strategies to deliver context grounded, zero-hallucination responses.

TECHNICAL SKILLS

Languages: Python (Pandas, Scikit-Learn, PySpark), SQL, R, Dart, C++

AI / ML: Machine Learning, Deep Learning, NLP, RAG, Time-Series Forecasting, Vector Embeddings, AWS Lex

Data Engineering: ETL Pipelines, Medallion Architecture, Data Modelling, Data Wrangling

Tools & Cloud: Microsoft Fabric, GCP, Firebase, Power BI (DAX), Flutter, Git, MS Excel, Azure Fundamentals

CS Foundations: Data Structures & Algorithms, OOP, Computer Networks, Cryptography, SDLC, DBMS, REST API

ACHIEVEMENTS & LEADERSHIP

Google DeepMind AI Sprint Hackathon — Top 9 Finalist

- Built a hyperlocal AI fashion marketplace with a price elasticity optimizer, Gemini-powered style sandbox, and Veo3 campaign generation in under 3 hours.

GovHack Australia — Honourable Mention

- Victoria Green Transit Strategy: Identified \$15M in regenerative economy potential and projected 25% carbon reduction through smart infrastructure and transit analysis.

Technical Coordinator • E-CELL SASTRA

- Led mobile platform dev with 500+ downloads and 1,000+ registered users; reduced manual communication overhead by 45% via automated networking features. Provided support and feedback to the junior developers.

Data Team Lead • Guardian Monitor | Gopher Industries | Deakin University

- Directed a cross-functional team of 12 for Guardian Monitor, fostering **teamwork** through peer-review frameworks and collaborative CI/CD strategies that accelerated project delivery cycles by 20%.
